

Implementation Plan and Next Steps

1 Week

Make data live by working with endpoint creator to enable CORS

Build out suite of test cases for small number of react componenets already in system

1 Month

Work with current bikeshare operator (in NY) to enable *historic* data to be retrieved via endpoint. Currently we only have point in time *snapshot* data, but the business would like the ability to look backwards (per requirements)

Work with business users/testers to improve UI and make tweaks where necessary

1 Year

Work with other bikeshare operators to expose endpoints that allow us to consume data regarding their bikeshare sites.
